I Claim:

9

10

11

12

13

14

15

16

- An apparatus for effecting a controlled startup of a processor device; the apparatus
 comprising:
- (a) a first signal-treating circuit coupled with a voltage supply locus; said first
 signal-treating circuit receiving a voltage supply signal and producing a first
 treated signal representing said voltage supply signal;
- (b) a second signal-treating circuit coupled with said voltage supply locus; said
 second signal-treating circuit receiving said voltage supply signal and producing a
 second treated signal representing said voltage supply signal; and
 - second treated signal representing said voltage supply signal; and

 (c) a comparing unit; said comparing unit having a first input locus coupled with said first signal-treating circuit and receiving said first treated signal; said comparing unit having a second input locus coupled with said second signal-treating circuit and receiving said second treated signal; said comparing unit generating an output signal at an output locus when said first treated signal has a predetermined relationship with said second treated signal; said output locus being coupled with said processor device; said output signal effecting said controlled startup.
- 2. An apparatus for effecting a controlled startup of a processor device as recited in

 Claim 1 wherein said processor device includes a reset control pin; signals applied to

 said reset control pin controlling a reset operation of said processor device; said

 output locus being coupled with said reset control pin.
- 3. An apparatus for effecting a controlled startup of a processor device as recited in
 Claim 1 wherein said first treated signal is a time-delayed representation of said
 voltage supply signal and wherein said second treated signal is a non-delayed
 representation of said voltage supply signal.
- 4. An apparatus for effecting a controlled startup of a processor device as recited in
 Claim 2 wherein said first treated signal is a time-delayed representation of said

13

- 3 voltage supply signal and wherein said second treated signal is a non-delayed
- 4 representation of said voltage supply signal.
- 1 5. An apparatus for effecting a controlled startup of a processor device as recited in
- 2 Claim 1 wherein said comparing unit is a comparator.
- 1 6. An apparatus for effecting a controlled startup of a processor device as recited in
- 2 Claim 5 wherein said processor device includes a reset control pin; signals applied to
- 3 said reset control pin controlling a reset operation of said processor device; said
- 4 output locus being coupled with said reset control pin.
- 1 7. An apparatus for effecting a controlled startup of a processor device as recited in
- 2 Claim 5 wherein said first treated signal is a time-delayed representation of said
- 3 voltage supply signal and wherein said second treated signal is a non-delayed
- 4 representation of said voltage supply signal.
- 8. An apparatus for effecting a controlled startup of a processor device as recited in
- 2 Claim 6 wherein said first treated signal is a time-delayed representation of said
- 3 voltage supply signal and wherein said second treated signal is a non-delayed
- 4 representation of said voltage supply signal.
- 9. An apparatus for controlling operation of a processor device during startup of said
- 2 processor device; the apparatus comprising:
- 3 (a) a signal treating circuit receiving a voltage supply signal at a voltage supply
- 4 locus; said signal treating circuit using said voltage supply signal for generating a
- first treated signal and a second treated signal; and
- 6 (b) an output circuit coupled with said signal treating circuit; said output circuit
- 7 receiving said first treated signal and said second treated signal and generating a
- 8 control signal at an output locus based upon a relationship between said first

- treated signal and said second treated signal; said output locus being coupled with said processor device; said control signal effecting said controlling.
- 1 10. An apparatus for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 9 wherein said processor device includes a reset
- 3 control pin; signals applied to said reset control pin controlling a reset operation of
- 4 said processor device; said output locus being coupled with said reset control pin.
- 1 11. An apparatus for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 9 wherein said first treated signal is a time-
- delayed representation of said voltage supply signal and wherein said second treated
- 4 signal is a non-delayed representation of said voltage supply signal.
- 1 12. An apparatus for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 10 wherein said first treated signal is a time-
- delayed representation of said voltage supply signal and wherein said second treated
- 4 signal is a non-delayed representation of said voltage supply signal.
- 1 13. An apparatus for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 9 wherein said output circuit comprises a
- 3 comparator.
- 1 14. An apparatus for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 13 wherein said processor device includes a reset
- 3 control pin; signals applied to said reset control pin controlling a reset operation of
- 4 said processor device; said output locus being coupled with said reset control pin.
- 1 15. An apparatus for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 13 wherein said first treated signal is a time-

DDM03-035

- delayed representation of said voltage supply signal and wherein said second treated 3 signal is a non-delayed representation of said voltage supply signal. 4 16. An apparatus for controlling operation of a processor device during startup of said 1 2 processor device as recited in Claim 14 wherein said first treated signal is a time-3 delayed representation of said voltage supply signal and wherein said second treated 4 signal is a non-delayed representation of said voltage supply signal. 17. A method for controlling operation of a processor device during startup of said 1 processor device; the method comprising the steps of: 2 3 (a) in no particular order: 4 (1) providing a signal treating circuit; and (2) providing an output circuit coupled with said signal treating circuit; 5 6 (b) operating said signal treating circuit to receive a voltage supply signal at at 7 least one voltage supply locus; (c) operating said signal treating circuit to use said voltage supply signal for 8 9 generating a first treated signal and a second treated signal; (d) operating said output circuit to receive said first treated signal and said second 10 11 treated signal; 12 (e) operating said output circuit to generate a control signal at an output locus; said control signal being based upon a relationship between said first treated 13 14 signal and said second treated signal; and (f) providing said control signal to said processor device for effecting said 15 16 controlling. 18. A method for controlling operation of a processor device during startup of said 1 2 3
 - processor device as recited in Claim 17 wherein said processor device includes a reset control pin; signals applied to said reset control pin controlling a reset operation of said processor device; said output locus being coupled with said reset control pin. 4

- 1 19. A method for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 18 wherein said output circuit comprises a
- 3 comparator.
- 1 20. A method for controlling operation of a processor device during startup of said
- 2 processor device as recited in Claim 19 wherein said first treated signal is a time-
- delayed representation of said voltage supply signal and wherein said second treated
- 4 signal is a non-delayed representation of said voltage supply signal.
